Model 270-4PORT Bowden Balancing Station

SUBMITTAL DATA

APPLICATION AND DESIGN

The Young Regulator model 270-4PORT Bowden Balancing Station is termination point for the model 270-275 controllers.

Should a concealed ceiling damper regulator compromise the esthetics of an architectural ceiling, a balancing station can be considered. Located in a mechanical room or other convenient location adjacent to the balancing dampers, the BBS is a neat and effective termination point to bring four (4) Bowden Cable 270-275 controls.
